

H2020 Marie Skłodowska Curie - PhD Offer – Job position

LIVE-I

Lightening and Innovating transmission for improving Vehicle: Environmental Impacts

H2020 – MSC – ITN - EID

ESR 5: Manufacturing margins and robustness of NVH prediction for lightweight transmissions

Joint PhD between University of Naples (Italy) and Vibrattec (France)

About H2020 Marie Skłodowska Curie program:

The H2020 Marie Skłodowska Curie program is European Union funded programme for structuring researcher training, mobility and career development. The program targets are: Prestigious career opportunities, Excellent working conditions: employment contracts, full social security etc, Very competitive salaries.

About LIVE-I MSc Project:

Figure 1. Multi-scale treatments of noise and vibration induced effects for lightweight gearbox design;

For several decades, vehicles have seen their weight increase to meet more demanding requirements of safety and comfort. At the present time, manufacturers need drastically reduce the energy consumption and greenhouse gas emissions without sacrificing any safety or comfort. Each vehicle element must be considered for weight reduction. In this regard, gear transmissions are a first choice candidate. LIVE-I project main objective is to achieve breakthrough technological progress in the design of lightweight gear transmission and to build an innovative training network in order to educate early stage researchers in this hot topic. ([LIVE-I project website](#))

Keywords: Greenhouse reductions, Lightweight constructions, Gear transmissions, Noise and Vibration Harshness, Efficiency, Knowledge based design, Robust design, Digital twins, Metamaterials, Smart systems.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 860243

Description of the PhD workplan:

Objectives: A gearbox is a complex system and, as consequence, its NVH performance is ruled by many parameters. Some of them cannot be precisely defined from a deterministic point of view and/or depend on manufacturing issues. In addition, some of them can introduce a non-linear behaviour. The research topic of this ESR is basically linked to these aspects. First of all, the ESR has to identify the source of uncertainties for a NVH predictive algorithm. Different numerical approaches have to be investigated in order to obtain a predictive tool which is able to fulfil the industrial needs and, specifically, reduce the computational cost. This aspect is mandatory due to the complexity of the specific structural-acoustic problem, the number of possible uncertainties and the need to bound the vibroacoustic response. Some aspects to be considered further in this work are: uncertainties and optimization algorithms; Defining the relevance of the uncertainties versus weight reduction; mathematical predictive tools; Ranking of standard and hybrid gearboxes versus uncertainties.

General informations and position requirements:

36 months funding for early-stage researchers only. The MSCA is a researcher mobility programme. You are therefore required to undertake transnational mobility in order to be eligible for recruitment. As such, Applicants must not have resided or carried out your main activity (e.g. work, studies) in **Italy** for more than 12 months in the 3 years immediately before the recruitment date ([Link1](#)). Recruited researchers will be hired by the academic beneficiary and must spend at least 50% of their recruitment period with the industrial beneficiary.

Requirements for applicants are:

- Excellent track record,
- Fluent English (written, verbal),
- Analytical skills and outstanding problems solving abilities,
- Passion for science and technology, motivation to undertake transnational mobility,
- Solid background in Mechanical Engineering, Mathematics, Acoustics and Material Science.

Benefits for the researcher:

- Prestigious PhD programme (Marie-Curie) including a very competitive salary,
- Work with renowned research scientists and industrial experts,
- Be exposed to multiple sectors (research labs, industry, start-ups/SMEs),
- Receive intensive training on a broad set of career-enabling skills (i.e. scientific, personal, communication, entrepreneurship, ...),
- Benefit from a 3-years immersion in an industry-oriented research environment with excellent career opportunities in both public and private sectors.

Application deadline: May 31, 2020 ; Expected starting date: October 1st, 2020

Please visit the “Call for applicants” tab on the [LIVE-I project website](#) for the online application form and more information.
